

Cervical Cancer

AI-Assisted Screening Kit

The X1 imaging screening kit can mark the cells for lab technicians to review the whole slide images of Pap smear with efficiency. X1 Sequencing, the HPV screening kit, provides an easy-to-use interface to assist doctors and technologists to analyze the NGS data, and performs 50 subtypes of HPV testing. Both can automatically export analysis reports.

Architecture

AI Box (MAB-T600)

- Support Intel 10th Gen. Core i Processor w/ Intel W480E Chipset
- 4 DDR4 U-DIMM, up to 128GB
- 2 x PCI-e x16 slot for 1 x PCI-e x16 or 2 x PCI-e x8 (By Auto switch IC)
- 2 x PCI-e x4
- IPX1 Front & Top
- Medical Certification Ready (UL-60601)

Features

Improve efficiency

Reduce time cost and the false negative rate

50 subtypes of HPV testing automatically export analysis report
