

Step1 :

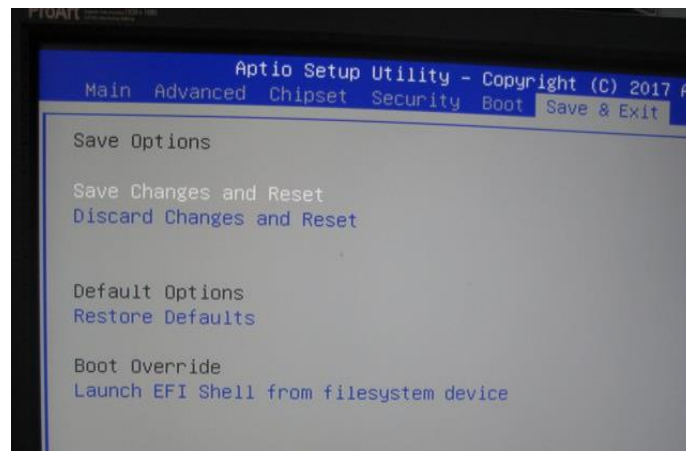

Set the option of Me FW Image Re-flash to "Enable" followed by the path Advanced\PCH-FW Configuration.

Step 2:

Use Save Changes and Reset to reboot system

Note: It is one-shot option, which means it would auto-Disable at next reboot

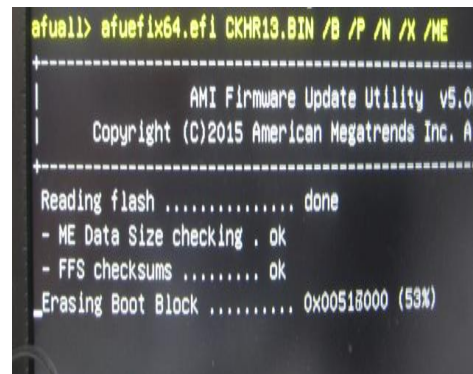

Step 3:

Flash BIOS batch file with ME via the given BIOS flash tool (either in legacy or UEFI mode) by Avalue. It will take a few minutes for ME update. And it needs to cut-off power and re-power on to force new ME setting activated after complete of ME update.

BIOS update in legacy mode

BIOS update in UEFI mode
